A smoother ride for auto workers

When a strike threatened in the auto industry in November 1934, Leon Henderson, Chief Economist of the National Recovery Administration, asked [BLS Commissioner Isador] Lubin's help in an investigation. The Bureau conducted a study of wages in the industry, including analyses of annual earnings, employment patterns, and seasonal fluctuations in production. Henderson and Lubin personally interviewed industry representatives. Among their recommendations was one accepted by the auto manufacturers, that new models be brought out in November, rather than in December, to achieve greater regularization of employment.
